2.6 Change and reason for change (since previous report)	The change is mainly due to:

2.7 Additional information	MMM 2014-2018 breeding season counts seem to have yielded very uncertain results for this species (uncertain trend in the short-term and long-term, the population ranging between 600 and 3500 pairs, where the minimum seems unrealistically low). There is no targeted survey project for Apus apus. Therefore, the former population estimate has been maintained.
