2.7 Additional information	MMM 2014-2018 breeding season counts, evaluated by average value of the surveyed years on 100 m radius. Different method: the figures gained from the MMM2014-2018 data were halved, because in this species both sexes are observed with a more or less equal chance (not only singing males).

3.3 Additional information	The national common bird monitoring scheme (MMM) has been running since 1999, and it suggests a stable trend for this period. There is no population trend data from before, but it can be assumed that the trend was similar.
