In the frame of the "A közösségi jelentőségű természeti értékek hosszú távú megőrzését és fejlesztését, valamint az EU Biológiai Sokféleség Stratégia 2020 célkitűzéseinek hazai szintű megvalósítását megalapozó stratégiai vizsgálatok" programme a new monitoring program was started in 2017. Several sample areas were selected where the northern shoveler could be breed. Experienced observers surveyed these areas and tried to prove that this species breed in these areas. This and the "Madáratlasz Térképezés" programmes and the national park directorates databases are the most important survey program of this species. According to the National Park Directorates' databases the Hungarian population is 200-300 breeding pairs. According to the mentioned above
