Short term trend analysed by TRIM.

Bird species' status and trends reporting format for the period 2008-2012 (Annex 2)

Magnitude of the short term trend (min-max): 9 - 34 %

The trend values in 3.1.3. fields is calculated to the reported period by multiplication of the annual change. The annual change value is a multiplicative slope calculated by TRIM. The maximum and minimum values presented in this field above are the 95% CI range of the TRIM calculation.
