REPORT FROM EXPLORATION WORKS

Ctirad Piskač

Translation: Luděk Vlček

This year, we had 19 participants. The base camp was situated in the shallow doline called Csehek camp, closed to the Komjáti jég zs. Like every year, we left the site clean and without any rubbish.

**The aim of the exploration works was:**

- Check of the status of bottom part of the Éves zomboly
- Prolongation in Reményteljes szakadék
- Preliminary survey tests with Lidar

## Results

This year were no significant results in the exploration. Prolongation in Reményteljes szakadék was without significant results. We did a check in Naszút zs. It looks that there is a potential for further exploration. We will consider this in the plans for 2024.

We tested surveying using lidar. It looks that this new technology is promising. It draws the 3D maps, but there are still issues with smooth surface look.

Sincerely  
Ludek Vlk
